DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 7/10/2007 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-35 are rejected under 35 U.S.C. 102(b) as being anticipated by Choi et al., (U.S. patent No. 6,006,335).

As per claims 1,19,26,32 Choi shows an apparatus an image display, responsive to input power, for providing at least one illuminated image by means of said image display; a power source, responsive to a fade-in signal and a fade-out signal, for providing the input power to the image display; mode selection means, responsive to a selection from the user who selects a mode of operation, for providing a repetitive mode selection signal if the user selects a repetitive mode; timing control means, responsive to the repetitive mode selection signal from the mode selection means, for automatically

providing the fade-in signal indicative of increased power, and the fade-out signal indicative of decreased power, repeatedly wherein apparatus is functional in more than one mode(in col.4 lines 12-67).

As per claims 2-15,20-25,27-31,33-35 Choi shows n the more than one mode includes the repetitive mode in which the at least one illuminated image fades in and later fades out if the environment is dark, and an off mode in which the image is not visible if the is in a dark environment, and a fully on mode in which the at least one illuminated image is fully visible without fading and timing control means is also for operating the with less than full power at substantially all times during the repetitive mode, and for varying the power during the repetitive mode so that the at least one illuminated image has an intensity that appears constant to a human eye over a period of less than five seconds and wherein the power source comprises a battery, and also comprises a switching device for regulating the power flow from the battery(in col.5 lines 1-67).
